

## **THE WORLD TRADE ORGANIZATION (WTO) IN NEED OF ECOLOGICAL REFORM? - A CLOSE LOOK AT THE EXISTING PROPOSALS BY THE EUROPEAN PARLIAMENT**

by Andreas R. Ziegler\*

### **INTRODUCTION**

As of 1998, the debate on "Trade and Environment" has been going on for almost ten years. After the successful conclusion of the Uruguay Round<sup>1</sup> in 1993 and in view of the newly created World Trade Organization (WTO) in 1994 many observers thought that the WTO would now approach the existing problems in this field without further delay. These expectations were reinforced by the Ministerial Decision on Trade and Environment on occasion of the signature of the Final Act in Marrakesh<sup>2</sup> on 14 April 1994 and the creation of a Committee on Trade and Environment (CTE) in early 1995.<sup>3</sup>

The reality, however, proved to be different. After some initial enthusiasm, the impetus seems to have slowed down considerably and the work presented by the CTE at the first Meeting of the Contracting Parties<sup>4</sup> of the WTO in December 1996 in Singapore was not up

---

<sup>1</sup> The Uruguay Round of multilateral trade negotiations to liberalise international trade in the framework of the General Agreement on Tariffs and Trade (GATT) was started in 1986 and concluded in 1993, leading to the signature of the Final Act in 1994. It led, in particular, to the creation of the new WTO (coming into effect on 1 January 1995) and an extension to trade in services and trade-related intellectual property rights.

<sup>2</sup> Marrakesh Decision on Trade and Environment, as adopted by the Heads of Governments and States on occasion of the signature of the Final Act including the Results of the Uruguay Round on 14 April 1994, as reprinted, for example, in GATT, *The Results of the Uruguay Round of Multilateral Trade Negotiations* (GATT, Geneva, 1994).

<sup>3</sup> The Committee on Trade and Environment (CTE) replaced in 1995 the old GATT Working Group on Environmental Measures in International Trade (EMIT), as established as early as in 1971, whose work temporarily had been taken up by the Sub-committee on Trade and Environment under the Preparatory Committee for the WTO in 1993/4.

<sup>4</sup> See the Singapore Declaration by the Heads of Governments and States, as adopted in Singapore on 13 December 1996 and reprinted, for example, in *WTO Focus* (January 1997), at 7.

to the high expectations by environmentalists and international lawyers.<sup>5</sup> While the current problems seem to be identified<sup>6</sup>, the solutions suggested by legal writers, NGOs and other actors seem far from any form that could reach consensus. On the whole, there are only a few concrete proposals for a reform of the WTO and especially the GATT system. They generally ask for the introduction of substantive or procedural provisions into the existing treaties in order to take account of today's regional and global ecological problems.

The European Community due to its commercial strength is undoubtedly one of the main actors within the WTO besides the United States. It is therefore interesting to observe that, in particular, the European Parliament has closely followed the trade and environment debate since the early 1990s and actively participated in the debate on the ecological reform of the world trading system and, in particular, the WTO and thereby constantly pushed the Commission to take action (admittedly with variable success). The following article therefore tries to analyse the development of the European Parliament's various proposals over time in view of the current debate and to place their views and suggestions within the framework of the general debate in order to show which positions are taken by the European Parliament, how much they are backed by the Commission and the Council, and to what extent they contrast with the views expressed by other main actors such as NGOs, developing countries and the various international organisations involved.

## A. DEVELOPMENT OF THE TRADE AND ENVIRONMENT DEBATE

Within the European Union (EU) the debate on trade and environment has existed since the late 1960s. It was, however, a predominantly internal debate related to the relationship between domestic environmental policies of the member states and the establishment of the Common Market (later the Internal Market)<sup>7</sup>. Within the Community the ecological and economic problems encountered over the years and the corresponding political tensions have led

---

<sup>5</sup> See also the European parliament's Resolution A4-0156/965 (recommendations 6 and 7) as discussed in detail below.

<sup>6</sup> See, for example, *Thomas J. Schoenbaum*, Trade and Protection of the Environment: The Continuing Search for Reconciliation, (1997) 91 *American Journal of International Law* 268-313, for a recent update.

<sup>7</sup> Article 100a EC Treaty, as introduced under the Single European Act in 1986, refers to the Internal Market, while the elder Article 100 EC Treaty speaks of the Common Market. Several authors have tried to show the possible distinction between the two concepts. Nowadays, however, the difference seems merely one of terminology and the concept of the internal market has mostly replaced the older term whenever the European Union's market for goods, services, labour, and capital is concerned. See *Andreas R. Ziegler*, Trade and Environmental Law in the European Community, Oxford University Press, Oxford, 1996, 155-7 for details.

to the development of a fine-tuned legal system within the treaty to coordinate national environmental policies and the needs for the establishment of the internal market<sup>8</sup> which is supplemented today by a proper Community environmental policy<sup>9</sup>. The latter is growing very fast and takes over more and more areas of traditionally domestic regulations in the field of the environment as well as in the related areas of health protection and consumer policy.

With regard to the global level and the development of an international trading system (which at times can interfere with domestic and Community environmental regulations) the debate is much younger. While the 1971 Stockholm Summit on the Environment led to some work within the GATT<sup>10</sup> and various other institutions on the relationship between global trade and environmental policy and actually was very important for the development of the Community's environmental policy<sup>11</sup>, there was done little follow-up work during the 1970s and 80s in this area. Mostly the two tuna-dolphin decisions<sup>12</sup> of 1991 and 1993 (still within the old GATT dispute settlement system) as well as the discussion on the environmental aspects of NAFTA<sup>13</sup> and the preparation of the 1992 Rio Earth Summit<sup>14</sup> have started a new era for the trade and environment debate. It is in this context that several Community institutions, and most prominently the European Parliament, got involved into the debate on the need for an ecological reform of the world trading system.<sup>15</sup>

<sup>14</sup> United Nations Conference on the Environment and Development (UNCED), held on 3-14 June 1992 in Rio de Janeiro (Brazil).

<sup>15</sup> Other institutions also prepared papers and reports on the relationship of the world trading system and the environment in preparation for the Rio Summit, such as most prominently the GATT itself in *GATT, Report on Trade and Environment* (1991) 1 *International Trade* 19-44 and the World Bank (International Bank for Reconstruction and Development = IBRD) which had several working papers prepared, such as reprinted in *Patrick Low*, *International Trade and the Environment*, World Bank Discussion Papers vol. 159 (IBRD, Washington DC, 1992).

## B. UNDERLYING PRINCIPLES OF THE PARLIAMENT'S PROPOSALS (1993-96)

### I. Development

Early in 1991 two members of the European Parliament (*Pimenta* and *Muntigh*) first called upon this institution to make recommendations on the building of awareness of sustainable development and its impact on trade into the basic statutes and working methods of either a revised GATT or a future World Trade Organization (WTO).<sup>16</sup> The resulting report was tabled on 3 November 1992 and discussed in the Parliament's sitting of 22 January 1993 and a first Resolution on Environment and Trade (hereinafter: Res. 1993) was adopted.<sup>17</sup>

Subsequently, from 7-9 November 1993 the Parliament was the host of a conference on trade and environment and on 24 March 1994 (in view of the conclusion of the Uruguay Round and the expected signature of the Final Act in Marrakesh in April) the Parliament adopted again a Resolution concerning the envisaged work programme on trade and environment as announced by the GATT Trade Negotiations Committee (hereinafter: TNC) on 15 December 1993 (hereinafter: Res. 1994)<sup>18</sup>. This resolution confirmed many of the Parliament's earlier recommendations and viewpoints and reminded the Council and the Commission that the

---

<sup>16</sup> Motion for a Resolution on the Future of Trade and Environmental Issues (B3-0668/91). At the sitting of 13 June 1991 the President of the European Parliament announced that he had forwarded the motion for a resolution by Messrs. Pimenta and Muntigh on the future of trade and environment, pursuant to Rule 63 of the European Parliament's Rules of Procedure, to the Committee on External Economic Relations as the Committee responsible and to the Committee on the Environment, Public Health and Consumer Protection for its opinion. On 17 July 1991 the Committee on External Economic Relations decided to draw up a report and appointed Mr. Spencer as his Rapporteur who presented a draft report which was considered by the Committee at its meetings of 15 July, 30 September and unanimously adopted on 15 October 1992. The Committee on the Environment, Public Health and Consumer Protection appointed at its meeting of 27 September 1991 Mr. Pimenta as its draftsman. The draft opinion was considered at its meeting of 26 March and adopted unanimously on 7 October 1992.

<sup>17</sup> European Parliament: Resolution on Environment and Trade of 22 January 1993 (A3-0329/92), OJ 1993 C 42/246-50. The resolution of 1993 had basically three parts, after the traditional reference to existing documents and work done by the Parliament and other bodies, the second part contains 29 remarks taken from the report presented by the Committee on External Relations (A to Z and AA to AC). Finally, in its third part, the resolution contained 14 recommendations with regard to the development of environmental issues within the future trading order.

<sup>18</sup> European Parliament: Resolution and Recommendation concerning the negotiations within the GATT Committee on Trade on the Agreement for a Work Programme on Trade and Environment of 24 March 1994 (A3-1050/94), OJ 1994 C 114/35-8.

Parliament would have to consent to the ratification of any agreement resulting from the Uruguay Round and would use its power under Article 228 (3) EC Treaty to give effect to its suggestions - a threat that showed no consequences, however, in the European Parliament's decision on the Final Act including the Results of the Uruguay Round on 14 December 1994.<sup>19</sup>

After the establishment of the working programme of the WTO Committee on Trade and Environment, the Parliament made again recommendations with regard to the EU's contribution in view of the upcoming Singapore Ministerial Meeting in December 1996. In its Resolution of 10 June 1996 concerning the Negotiations on Trade and Environment in the Framework of the WTO (hereinafter: Res. 1996a) the Parliament reiterated many of its former demands but added further details with regard to the areas it considered of primary importance<sup>20</sup>. Immediately before the Singapore Meeting the Parliament adopted yet another Resolution<sup>21</sup> (hereinafter Res. 1996b) in response to a communication by the Commission regarding the EU's envisaged position at the Singapore Meeting.<sup>22</sup>

## II. Need to Act and Discontent with Current Situation

The Parliament bases its considerations on the general desirability and need to integrate environmental concerns into the world trading order due to the urgent need to protect the global common resources, such as the oceans, the forests<sup>23</sup>, and the atmosphere (Res. 1993 E and P). It held from the beginning that all Bretton Woods Institution had to be reviewed in this respect (Res. 1993 13) and underlined already in its 1993 resolution its discontent with the current treatment of the relationship between trade and environment within the GATT. It held that the first GATT panel decision on the tuna/dolphin dispute between the United States and Mexico had been widely, if inaccurately, interpreted as threatening valuable existing envi-

<sup>19</sup> European Parliament: Legislative Decision concerning the Proposal of the Commission for a Decision of the Council to accept the results of the multilateral trade negotiations in the framework of the Uruguay-Round of 14 December 1994 (A4-0093/94), OJ 1994 C 18/61-2.

<sup>20</sup> European Parliament: Resolution Concerning the Negotiations in the Framework of the WTO on Trade and Environment of 24 May 1996, OJ 1996 C16/260-2.

<sup>21</sup> European Parliament: Resolution Concerning the Communication by the Commission to the Council and the European Parliament on Trade and Environment (COM(96)0054 - C4-0158/96 of 14 November 1996) (A4-0319/96), OJ 1996 C 362/245-8.

<sup>22</sup> European Commission: Communication by the Commission to the Council and the Parliament - Trade and Environment of 28 February 1996 (C4-0158/96): COM(96) 54 final.

<sup>23</sup> Interestingly the Parliament does not only refer to tropical forests, which are usually referred to because of their fast-advancing degradation and their importance with regard to world biodiversity.

ronmental legislation (Res. 1993 V).<sup>24</sup> The Parliament also expressed its discontent with regard to the ongoing Uruguay Round at that time, considering the failure to place the environment on the agenda to be "a major error" (Res. 1993 D) and criticising the fact that the *Dunkel Draft* did not incorporate the necessary environmental provisions (Res. 1993 L). The inclusion of such aspects in the Uruguay-Round had been part of the Commission's V Action Programme for the Environment "Towards Sustainability" - without any clear results to that moment. The integration of environmental rules should be no longer delayed as "a trade free for all without rules would be a disaster for the global environment" (Res. 1993 E). While the subsequent establishment of a trade and environment agenda for the WTO by decision of the TNC Committee in 1993 was welcomed it was not considered a sufficient way of dealing with the current problems (Res. 1994 A).

### III. Environment - Social and Labour Rights -Human Rights

The Parliament considers the protection of the environment just one of *the common concerns* that have to be addressed when looking at international trade today, - other such concerns being human rights and social and labour standards. The fact that trade takes place between countries where different legal and factual situations reign generates claims from affected industries that such differences lead to "unfair" distortion of trade patterns and should therefore be harmonised or counterbalanced. The regulation of what were traditionally considered purely internal affairs (such as domestic environmental policy, human rights standards, labour standards, competition standards) becomes thereby of common concern. Because of the irreversible processes of the destruction of the environment, however, its protection is considered different from other concerns, in so far as it deserves an immediate and direct approach in the existing trade agreements (Res. 1993 A). The Parliament thereby tries to avoid the problems generally referred to as "slippery slope risk", i.e. that too many policy areas might be integrated into the WTO system and that the over-regulation of domestic policies will ultimately make free trade impossible<sup>25</sup>.

At the same time the Parliament does not want to rule out completely the desirability of some kind of social standards with regard to the trade and environment debate. The Parliament re-

---

<sup>24</sup> Later, the Parliament felt such criticism by the public also following the gasoline decision of early 1996 (United States - Standards for Reformulated and Conventional Gasoline, WT/DS2, Report adopted on 20 May 1996, Appellate Body Decision (AB-1996-1) adopted on 20 May 1996. For comments see *Andreas R. Ziegler*, Erste Erfahrungen mit der Berufungsinstanz der WTO (1996) 51 *Swiss Review for International Economic Relations* 417-32) and warned that such public discontent could jeopardise the future of the WTO (Res. 1996b 3).

<sup>25</sup> See, for example, the considerations made by the GATT Secretariat in its 1991 Report on trade and Environment.

fers to the link described in the Brundlandt Report<sup>26</sup> between poverty and destruction of the environment, and holds that this particular connection indicates the need for account to be taken of social and human minimum standards, possibly in multinational agreements (Res. 1993 B). While the Parliament still held in 1993, that the protection of the environment had to be considered with priority because of its irreversibility and global implications, the resolution of December 1996 states now that the issues of human rights and social standards can no longer be treated separately from the environmental questions and should therefore be addressed within the EU (1996b 25).

#### IV. Financial Help and Transfer of Technology

The Parliament accepts that the setting of minimum (environmental) standards may lead to considerable and continuing financial transfers between contracting parties (Res. 1993 Z), - a proposition generally feared by western industrialised countries and therefore generally rejected as a starting proposition. The Parliament holds, however, that the global destruction of the environment can only be overcome if less developed countries have access to modern technology in order to avoid pollution and produce cost and environmentally efficient. The Parliament therefore underlines the need to help ensure within the framework of development cooperation that the best available technologies can be applied (Res. 199310 [c]) which by its very nature implies again some sort of financial transfer (trade preferences<sup>27</sup>, unilateral reduction of debt, cost-neutral transfer or technology)<sup>28</sup>, as developing countries are usually unable and unwilling to purchase the best available technologies which are usually very costly and protected by the international standards applicable to international property rights.<sup>29</sup>

The Parliament has full understanding for the concerns of developing countries that the United States and the EU might try to use higher environmental standards to disadvantage them but calls for closer cooperation in order to include them in the urgently needed action to

---

<sup>26</sup> World Commission on Environment and Development, Our Common Future (generally referred to as Brundtland Report) (UN, New York, 1987)

<sup>27</sup> The Parliament therefore invited to the Commission to restructure its system of general preferences in order to grant preferential treatment to other goods than tropical timber which had been produced in an environmentally sound manner (Res. 1996b 12) and consider a full tariff exemption of products from fair trade such as bananas, coffee, tea, and introduce in the short term so called fair trade quotas where lower tariffs apply (Res. 1996b 13 and 14). The Commission seems sympathetic to such measures, see Commission Communication (1996), above n. 22, 17.

<sup>28</sup> As outlined in Res. 1996b. 11.

<sup>29</sup> As just reinforced under the TRIPs Agreement of the Uruguay-Round and heavily backed by the Commission. See Commission Communication, above n. 22, 28.

save the global resources (Res. 1994 4). It was therefore only logical for the Parliament to ask in its 1994 Resolution that the introduction of environmental considerations in the WTO system should be accompanied by a raise in EU aid to developing countries (Res. 1994 2). For the European Parliament this seems to be an essential consequence from the special responsibility of the countries of the "North" for sustainable development at the global level (Res. 1996b A). The Commission, obviously, is not at all willing to follow this approach. While it supports the general idea that technology should be made available to developing countries, it also holds that this should predominantly take place through education, technical support and cooperation in the framework of existing bilateral agreements and the multilateral schemes available within such as institutions as the World Bank<sup>30</sup> and related institution.

## **V. No Green Protectionism**

In particular, with regard to developing countries, the Parliament also constantly addresses the threat stemming from the abuse of trade-related environmental measures for protectionist purposes and therefore underlines again and again the need to avoid the manipulation of the relationship trade and environment by protectionist acting against the interests of the developing countries (Res. 1993 C, Res. 1994 2, Res. 1996a 9, and Res. 1996b C). The Parliament defends the general principle that parties may use non-tariff barriers to protect the environment, the landscape and natural resources, provided they are not used as a pretext for protectionism (Res. 1993 10 [c]) without, however, addressing the crucial question of how genuine measures can be distinguished from green protectionism.

---

<sup>30</sup> Commission Communication 1996, above n. 22, 16-7.

## **VI. Mutually Beneficial Relationship and Need to Balance**

The Parliament also subscribes to the general wisdom that sensible environmental guidelines do not hinder free trade and that trade can help the environment where specialisation uses resources without waste (Res. 1993 F) and accepts the general idea that free trade induced wealth normally leads to an increase in the proportion of national expenditure on the environment (Res. 1993 M). But, at the same time, the Parliament underlines that economic growth alone cannot protect the environment for it is also necessary to take into consideration cumulative per capita claims on world resources and sustainability (Res. 1993 M and Res. 1996b B). It therefore invited in 1996 the WTO to consider in its future negotiation rounds the fact that globalisation and increased trade involve also more transport needs and energy consumption and that these aspects have to be addressed (Res. 1996a 16 and Res. 1996b 18 and 19). This statement seems particularly interesting in view of the EU's internal problems with its energy<sup>31</sup> and transport policy, as well as with regard to its negotiations of a bilateral agreement with Switzerland and the encountered problems with regard to road transport in 1997.

## **C. PROPOSED REFORM OF WTO INSTITUTIONS AND NEGOTIATIONS PROCESS**

### **I. General Environmental Principles**

On the whole, the general principles underlying the GATT are considered by the Parliament to be unable to solve the current problems. In particular, the Parliament requests that the GATT should take into account the internalisation of costs<sup>32</sup>, the polluter-pays-principle, the user-pays-principle, the precautionary principle and the principle of prevention (Res. 1993 R) as well as the principle of sustainability. The Parliament considers that the integration of these principles "would imply a new structure of world trade because the internalisation of external costs and the careful handling of limited resources would substantially alter global production structures" (Res. 1993 S and 2). After the conclusion of the Uruguay Round the Parliament suggested that also the TRIPs Agreement and the GATS should be reformed in order to integrate ecological principles into the existing agreements (Res. 1996b 23).

In view of this analysis the Parliament underlined already in 1993 the need for a final declaration accompanying the conclusion of the Uruguay Round (Res. 1993 5) and to issue a political declaration expressing the contracting parties' determinations that the Uruguay Round

---

<sup>31</sup> See also the Commission's greenbook on an energy policy for the EU (COM(94)0659 - 4-0026/95, and the reaction by the Parliament, in OJ 1995 C287/34.

<sup>32</sup> Here again explicit reference was made to the OECD guidelines of 1972.

would be fully consistent with global environmental objectives (Res. 1993 9). These recommendations were obviously fulfilled in form of the Marrakesh Declaration on Trade and Environment of 14 December 1994. The same is true with regard to the need, expressed by the Parliament, to integrate an additional recital concerning the environment in the Preamble of the WTO Statute as an integral part of the Uruguay Round negotiations (Res. 1993 6). The Parliament had suggested that it should read: "recognising that their trade liberalisation endeavours should contribute towards the promotion of sustainable development in a manner which respects the environment". While the *Dunkel Draft* had not contained any such reference, the Final Act contained the following statement:

"Recognizing that their relations in the field of trade and economic endeavour should be conducted with a view to raising standards of living, ensuring full employment and a large and steadily growing volume of real income and effective demand, and expanding the production and trade in goods and services, while allowing for the optimal use of the world's resources in accordance with the objective of sustainable development, seeking to protect and preserve the environment and enhance the means for doing so in a manner consistent with their respective needs and concerns at different levels of economic development ..."

This final form of the preamble only partly convinced the Parliament as it is reflected in the Parliament's Resolution of 1994 (Res. 1994 3). The establishment of a Committee on Trade and Environment, as also requested for by the Parliament (Res. 1993 8 and Res. 1994 D) and finally announced in the Marrakesh Decision on Trade and Environment seemed only a logical continuation of the work started by the EMIT working group anyhow. The creation of an Environmental Council, as suggested by the Parliament (Res. 1993 7 and Res. 1994 5), however, was not taken up in the Final Act nor later by the WTO Contracting Parties. In the Parliament's view this council should have been empowered to review all future WTO decisions in the context of their impact on the global environment and reported directly to the General Council before such decisions were taken, thereby implementing something similar to an "environmental impact assessment" of all WTO decisions.

## II. Non-discrimination and Ecological Aspects of Products

The Parliament underlines that the existing GATT rules define the national treatment (which normally allows for the restrictions of environmentally undesirable product, provided that imports are treated in the same way as national products) in a way which can cause tensions in the setting of technical standards (Res. 1993 T). This is particularly true in the framework of Articles I GATT (Most Favoured Nation Clause) and Article III GATT (National Treatment) as well as under the new SPS- and TBT-Agreements of the Uruguay-Round<sup>33</sup>, as it was

<sup>33</sup> Agreement on the Application of Sanitary and Phytosanitary measures (SPS-Agreement) and Agreement on Technical Barriers to Trade (TBT-Agreement), as reprinted in Final Results of the Uruguay Round, above n. 2.

shown again most recently in the Hormone Dispute between the EU and the United States and Canada.<sup>34</sup> Probably in view of this upcoming dispute the Parliament made a statement in 1996 (sharing the view of the Commission) that even under the new WTO system trade measures adopted in order to safeguard consumer health and environmental objectives were always available as long as they are product-related and applied without discrimination (Res. 1996b 20 and 21), a view that was not fully shared by the appointed WTO panel in August 1997 with regard to sanitary and phytosanitary measures falling within the scope of the SPS-Agreement.<sup>35</sup>

Only in the resolutions of 1996 started the Parliament to underline the need to introduce a general prohibition of exports of domestically prohibited goods (Res. 1996a 5 and Res. 1996b 10) and asked for a further development of rules applicable to voluntary and compulsory labelling schemes (Res. 1996a 5 and Res. 1996b 5 [d] and [e]). But at the same time it called upon the Commission not to consent to any regulations within the WTO which would be in contradiction to the existing regulations within the EU (Res. 1996 15). In particular, the Parliament held that any labelling rule should be based on a life-cycle assessment of a product (Res. 1996b 5[d], 16, and 17). In view of this situation the Parliament called also upon the existing working group to elaborate a series of GATT-compatible instruments of environmental policies, focusing on fiscal and economic measures (Res. 1993 recommendation 11).<sup>36</sup>

On the other hand, the European Parliament has stressed that the treatment of processes and production methods (usually referred to as PPM measures) that are environmentally undesirable is more difficult because of problems of definition and enforcement, and that labelling can only partially solve this problem (Res. 1993 U). It called therefore for a more generous interpretation or even rewriting of Article XX GATT (exceptions from general rules). In its view, such a reform is needed for the defence of the Global Commons (Res. 1993 AA and AB) and Articles XX (b) and (g) GATT should be extended to include better "protection of the environment and the biosphere" and automatically allow for all measures taken according to Multilateral Environmental Agreements (MEAs) (Res. 1993 10, Res. 1994 1a, reiterated in Res. 1996a 11 and Res. 1996b 5 [a]). In its second resolution of 1996 the Parliament asked even for a rewriting or reinterpretation of Article XX (a) GATT (availability of exceptions in order to satisfy public moral) in order to allow contracting parties to take animal welfare considerations into account when adopting trade measures (Res. 1996b 6). This is particularly interesting and understandable in view of the existing dispute between the EU and various other WTO parties with regard to import bans on products from animals caught by leghold

<sup>35</sup> *idem.*

<sup>36</sup> In 1994 the Parliament suggested, that besides the aforementioned Article XX also Article XVI (Subsidies) should be reconsidered in view of environmental subsidies (Res. 1994 1a).

traps<sup>37</sup>.

### III. Greening of the Dispute Settlement Procedure (Environmental Expertise)

In view of the first tuna/dolphin decision the Parliament called in 1993 for a general reform of the dispute settlement system in order to satisfy the taking into account of ecological aspects in the dispute resolution process. It therefore recommended the extension of the consultations between the litigants under Article XXII GATT to include considerations with regard to environmental protection and natural resources (Res. 1993 10[b])<sup>38</sup>. This claim for a better integration of environmental considerations into the WTO dispute settlement mechanism was reiterated in 1996 (Res. 1996 5 and 14). At the same time the Parliament continues to consider the WTO dispute settlement system the only appropriate forum for all trade and environment disputes, even if comparable mechanisms were available in existing MEAs (Res. 1996a 14 and 1996b 8). The Commission, on the other hand, rather supports the development of separate dispute settlement mechanisms within more specialised environmental agreements.<sup>39</sup>

On the whole, the Parliament held that the GATT in general had not sufficiently recognised the mutual influence of trade and environment and does so far not have the in-house expertise on the environment for its dispute panel decisions. In order to create greater transparency the Parliament asks for the development of "Environment and Trade Guidelines" which should be developed in cooperation with environmental experts and INGOs (Res. 1993 AC and 1, Res. 1994 1[a] and 6, Res. 1996a 5, 17, and 18 and Res. 1996b 5b) and recommends that the GATT Secretariat should equip itself with environmental and financial expertise in the form of a consultative body composed of environmental experts (Res. 1993 3, Res. 1994 9, Res. 1996a 14, and Res. 1996b 9). Such institutional changes as well as the suggested two year moratorium on all GATT panel decision concerning the environment, as suggested by the Parliament in view of the existing lack of environmental expertise remained, however, unheard (Res. 1993 10 and Res. 1994 5).

<sup>37</sup> See Regulation 3254/91/EEC prohibiting the use of leghold traps in the Community and the introduction of pelts and manufactured goods of certain wild animals originating in countries which catch them by means of leghold traps or trapping methods which do not meet international human trapping standards of 4 November 1991, OJ 1991 L 308/1 ff.

<sup>38</sup> This had also been suggested by the Committee on the Environment, Public Health and Consumer Protection, in PE 201.431/fin, Annex.

<sup>39</sup> Commission Communication (1996), above n. 22, 25.

#### IV. Competitiveness Issues and Proposals for Reform

The Parliament had also to address the issue of the competition of competitiveness effects of divergent environmental standards in various jurisdictions trading with each other. The Parliament based its considerations on a World Bank Discussion Paper which estimates that environmental compliance costs rarely exceed 3% and that few actual examples can be found of relocation of in search of weaker environmental rules (Res. 1993 O), as it had also be underlined by the OECD in a study of 1995<sup>40</sup> (Res. 1996b C). The Parliament holds even that higher environmental standards can lead to higher competitiveness thanks to a more efficient use of raw materials and energy (Res. 1993 Q).

Nevertheless, in view of the global problems and the trade distortion resulting from the missing internalisation of external costs in many countries the Parliament demands that the GATT should take into account the internalisation of costs and that the GATT EMIT working group should therefore have included in its working programme this issue (Res. 1993 R and 2). With regard to energy costs the Parliament even suggests that the fact that the external cost of increased energy consumption is usually not reflected in the price for energy leads to hidden "dumping", thereby indirectly calling again for some form of energy tax (Res. 1996b 19).<sup>41</sup> Furthermore, the Parliament holds, that the GATT should clarify that "environmental dumping"<sup>42</sup> is generally prohibited (Res. 1993 10 [c]) without, however, addressing what it considers environmental dumping and how this can be defined. This obviously strongly contradicts the views generally expressed by the Commission that differences in regulatory measures (and in particular taxes) should not lead to the levy of any kind of eco-duties on trade and that the term "eco-dumping" is not a valid description of such a situation. At the same time, however, even the Commission has suggested that the WTO should reconsider its current approach to border tax adjustment measures and reconsider whether "taxes occultes" such as domestic taxes on energy (once incorporated in products usually referred to as "grey energy") could be taken into account.<sup>43</sup>

In its Resolution of 1996 the Parliament for the first time addressed the issue that the ecological behaviour of companies and multinational corporations should be addressed in the framework of a possible regulation of international competition rules under the WTO (Res.

---

<sup>40</sup> OECD, Report of the Ministers for Trade and Environment (OECD, Paris, May 1995), 5.

<sup>41</sup> Any such tax has encountered resistance so far within the EU and within most other industrialised countries. A few exceptions exist: Denmark, the Netherlands, Sweden etc.

<sup>42</sup> The 1993 Proposal of the Committee on the Environment, Public Health and Consumer Protection had suggested to amend Article VI of the GATT in order to allow that "where external environmental and resource costs are externalised these may be considered an inadmissible subsidy". See Committee on the Environment, Public Health and Consumer Protection, in PE 201.431/fin, Annex.

<sup>43</sup> See Commission Communication (1996), above n. n. 22, 12, 14 and 25.

1996a 10)<sup>44</sup>. This idea is particularly interesting, as the introduction of general competition rules is one of the other current key issues in the WTO. In late 1996 the Parliament asked even for a commission-supervised code of conduct for multinational corporations, such as studied in the framework of the OECD and the UN (Res. 1996b 15).

## V. Cooperation With Other Institutions and Integrations of MEAs

When making its own proposals the Parliament always refers to the existing work of other international bodies on the relationship of trade and environment such as undertaken by the OECD, UNCTAD<sup>45</sup>, and as developed in the framework of UNCED or the Earth Summit (Res. 1993 G, H, and I), as well as the work done within GATT itself, and especially the World Bank (Res. 1993 Introduction). The Parliament therefore welcomed the inclusion of the relationship between Multilateral Environmental Agreements (MEAs) and the GATT on the agenda of the EMIT working group as early as 1994, which should have led to first results at the Singapore Meeting in 1996<sup>46</sup>. It underlined that the working programme of the Committee on Trade and Environment should also have included the continuation of the work started at the Rio Earth Summit (Res. 1994 1 [a]), a proposal that showed no effect during the first two-years of the WTO's existence<sup>47</sup>. The Parliament asked therefore in 1996 again for an intensified cooperation and exchange of information between the various bodies involved in the trade and environment debate (Res. 1996 3 and 5).

The Parliament subscribes to the general statement that there is urgent need to ensure practical coherence between MEAs and the GATT/WTO system (Res. 1993 J, Res. 1994 B and 1 [a], and Res. 1996b 5 [c]) and demands that the experience from other negotiations such as in the fields of tropical timber<sup>48</sup>, CFCs, global warming and even animal welfare issues (Res. 1993 K) should be taken into account when addressing trade-related environmental issues under the WTO system. It underlines at the same time that multilateral measures involving trade measures should be compatible with GATT (Res. 1993 V and W) - as it was also held,

---

<sup>44</sup> The Parliament had expressed on other occasions its view that the integration of general competition rules into the WTO would be desirable, see OJ 1994 C 114/30 ff.

<sup>45</sup> Whose relevance is however considered "doubtful", as it is understaffed and ill-equipped to seriously consider environmental protection issues (Res. 1993 H).

<sup>46</sup> To the Parliament's discontent the CTE work in this field remains without practical effect (Res. 1996a 5).

<sup>47</sup> See also Res. 1996a 2.

<sup>48</sup> In its 1994 resolution however, the Parliament showed big disappointment with the outcome of the January 1994 ITTO (International Tropical Timber Organisation) negotiations (Res. 1994 8).

in principle in the two tuna/dolphin decision<sup>49</sup>. In order to address the legitimacy of MEAs the Parliament holds that the WTO/GATT parties should recognise a threshold to be agreed at an international level for the establishment of GATT enforceable multilateral environmental agreements (Res. 1993 4). The Parliament suggest a qualitative approach: once an agreement has been reached the participation of States which are responsible for a given percentage of the production of practices concerned it shall be considered automatically GATT-compatible. Obviously, the Parliament could not hint at where this threshold should lie. Nevertheless, the Parliament stated in 1996 that it considered that trade measures taken in the framework of MEAs should be generally available to the WTO parties also against WTO contracting parties who are not member a particular MEA given this country does not comply with the objectives of the MEA at stake and thereby gains "an inappropriate advantage from this behaviour and jeopardises the effectiveness of the agreement" (Res. 1996 12). Obviously the evaluation of such a situation would raise insurmountable problems in practice.

In any case, the Parliament held from the beginning that the GATT should encourage multilateral agreements (1993 consideration X) and that the GATT Secretariat should promote actively multilateral agreements amongst Contracting Parties (Res. 1993 3). It is in this context again that the Parliament recognises that the conclusion of such agreements will probably not be possible without some form of financial incentives of countries currently applying lower standards than internationally agreeable. (Res. 1993 Z). It was however, only in its most recent resolution of November 1996 that the Parliament suggested the creation of a proper UN sub-organisation to supervise the existing international environmental agreements and to undertake work in order to improve the enforcement and development of such agreements and, in particular, promote the search for solutions to the trade and environment debate (Res. 1996b 7).

At the same time the Parliament holds that unilateral measures play often a role as catalysts to create multilateral agreements (Res. 1993 Y) and their effect should therefore not be completely neglected when addressing their legitimacy. The Commission, on the other side, remains strongly committed to multilateral solutions<sup>50</sup> and rejects unilateral measures in general. With regard to unilateral PPM measures applied to enforce domestic standards in third countries, however, even the Parliament adopted in 1996 the view that they should not be available in cases where no European, North American or Japanese companies or their subsidiaries were involved or a multilateral environmental agreement existed (Res. 1996a 13). This does not prevent the Parliament from supporting the availability of border-tax adjustment measures for products which do not comply with internationally agreed production processes and methods (Res. 1996b 22), and the Parliament suggests that the tax revenue from such measures should be administered as a trust by the UN and redistributed to developing countries in order to advance the introduction of environmentally friendly technology.

## CONCLUSIONS

The Parliament is one of the few institutions which have dared to present complete proposals of reform for the GATT and WTO system. Their proposed modifications of the WTO are far from being generally acceptable and even within the European Union they differ considerably from the Commission's views. Nevertheless, they are generally relatively creative and drafted in a way that could lead to a slim but effective reform. Apart from those suggestions which seem considerably biased due to internal EU legislation and existing trade disputes (e.g. animal welfare, hormone dispute, EU labelling schemes) they seem a good basis for further discussion.

It is undoubtedly desirable that the WTO equips itself with environmental expertise and conscience in order to settle more accurately trade disputes which involve important environmental aspects. In principle, this is provided for already in the Dispute Settlement Understanding (DSU) of the WTO by the possibility for panels to call upon (environmental) experts, but the institutionalisation of environmental considerations - be it in the form of the integration of specific environmental principles (such as the polluter-pays-principle and the principle of life-cycle analysis) and/or an expert body advising the panels and other WTO institutions (e.g. environmental council, hearing of NGOs, etc.) - would be a more effective way of guaranteeing the integration of environmental concerns into the WTO decision-making. The national treatment principle (e.g. Article I, III GATT) and the related exceptions under Article XX GATT should be revisited in order to balance domestic needs for product standards and the trade liberalisation efforts of the WTO. At the same time, the issue of PPM measures and their treatment under the GATT, the TBT- and the SPS-Agreement must be approached in a more environmentally conscious way. The acceptance of something like a *rule of reason* (as under Article 30 EC Treaty)<sup>51</sup> might be a helpful means to avoid excessively strict limitation of domestic policy choices without having to allow green protectionism.

Sooner or later the international community will have to address the question whether there should be some form of international harmonisation of (minimum) environmental standards with regard to production and product measures. Whether such harmonisation is economically and ecologically desirable remains disputed. The experience made in most domestic and regional free-trade areas suggests, however, that this may be the only way to overcome important trade disputes and allow for further liberalisation of trade. The financial questions that arise with regard to such harmonisation will have to be addressed very soon and it seems unavoidable that there is some kind of support for those countries currently producing with very low environmental standards. While the Parliament's suggestions may seem too costly to

many industrialised countries (including the EU Commission) they at least to indicate a general willingness to accept the common but differentiated responsibility for the global environment subscribed to at Rio. Such harmonisation could take place by way of MEAs at global and regional level. Therefore, the clarification of the relationship of MEAs and the WTO system seems of primary importance.
