A NOTE ON SCIENCE AND DEMOCRACY

by ROBERT K. MERTON

SCIENCE, as any other activity involving social collaboration, is subject to shifting fortunes. Difficult as the very notion may appear to those reared in a culture which grants science a prominent if not commanding place in the scheme of things, it is evident that science is not immune from attack, restraint and repression. Writing a sci

At Springer Nature we understand the continuing value of high quality research, whether it was conducted last year or 100 years ago. We recognize its relevance to the next generations of researchers. Knowing the full journey of a topic, from the start, is a current and a future asset within the research life cycle.

The heritage of our brands is unequalled - Springer, Nature Portfolio, Palgrave Macmillan, Adis and Scientific American. We have preserved the most comprehensive collection of scholarly research records. Examples of ground-breaking research, many by Nobel Prize winners, dating back to 1851.

Big Science, « Bigger » (Dimensions.ai)

This business of 'publish or perish' has been a catastrophe. People write things which should never have been written and which should never be printed. Nobody's interested. But for them to keep their jobs and get the proper promotion, they've got to do it. It demeans the whole of intellectual life.

— Hannah Arendt, 1972^[7]

Reforming research assessment: The Agreement is now final

#1 Guillaume Cabanac commented September 2022

This Elsevier article cited 14 times contains several tortured phrases that make some passages hard to parse. These typically result from an attempt to avoid plagiarism detection using a paraphrasing software. So far, the following have been spotted:

Author Response

pected)

Elsevier's article, cited 14 times, contains so many tormenting phrases that some passages are difficult to analyze. This is usually caused by an attempt to avoid detecting plagiarism with a paraphrase. So far, the following have been monitored: How did these incorrect formulations escape proofreading by co-authors, editors, judges, copy editors, and typesetters?

Dear Sir, First of all, thank you for this email and valuable observation. I want to tell you that this was my first work and the first research I ever published. I have had subsequent publications, and my writing has improved a lot, and my style has improved a lot, and I promise you that I will pay attention to this note in my following publications. Second, let me explain to you why your question (How did these incorrect formulations escape proofreading by co-authors, editors, judges, copy editors, and setters?) for the following reasons : This manuscript contains valuable information in the field of study A great deal of effort went into it. And the eagerness and eagerness of readers who specialize in this field. Researchers need this valuable information carefully collected in their research The beauty of the manuscript and its arrangement. The scholarly contribution given in a helpful summary is in a table. The beauty of eliciting and extracting knowledge and writing correct facts. This observation does not hinder researchers from benefiting from the research at all. This observation relates to something essential and beautiful in writing and is not associated with something fundamental in the knowledge provided by the manuscript. All of these and other reasons made the note was invisible. Third, this is not a dilemma for researchers who benefit from the information and knowledge contained in the manuscript by extracting the words corresponding to them in the meaning, as you have extracted them now. Fourth, maybe if attention to it was better, we can consider it a tiny flaw in this work. Let us return to the well-known wisdom that nothing is free of defects in any field, meaning there is no 100%. And in the end, I thank you again for your observation.
